*"The scholarship here is excellent. These people know their region and its literature cold. This collection demonstrates the potential of qualitative Southeast Asian area studies to contribute to the broader accumulation of knowledge in political science, including the development of disciplinary theory."*

--Jack Snyder, Columbia University

This book argues that Southeast Asian political studies have made important contributions to theory building in comparative politics through a dialogue involving theory, area studies, and qualitative methodology. The book provides a state-of-the-art review of key topics in the field, including: state structures, political regimes, political parties, contentious politics, civil society, ethnicity, religion, rural development, globalization, and political economy. The chapters allow readers to trace the development of the field of Southeast Asian politics and to address central debates in comparative politics. The book will serve as a valuable reference for undergraduate and graduate students, scholars of Southeast Asian politics, and comparativists engaged in theoretical debates at the heart of political science.
